02 DATA SOURCE

there is no dataset to work on

03 CONTEXT

You are working as a Junior Data Analyst in a retail company. The company receives daily sales figures manually from different branches. Before moving to advanced analysis tools, management wants you to build a reliable Python script that can collect, validate, and analyze basic sales data. This assignment ensures you fully understand Python fundamentals before moving to data analysis libraries like NumPy and Pandas.

REQUIRED TASKS

Part_1 :

1. Ask the user to enter daily sales amounts until a negative number is entered.
2. Store all valid sales values in a list.
3. Create a dictionary where the key is the day number and the value is the sale amount.
4. Calculate total sales, average sales, maximum and minimum sale.
5. Create separate functions for each calculation.
6. Add validation to handle non-numeric inputs gracefully.

Part_2(Hacker Rank) :

1. **Hello World**: https://www.hackerrank.com/challenges/python-hello-world
2. **Arithmetic Operators:** https://www.hackerrank.com/challenges/python-arithmetic-operators
3. **Python Division:** https://www.hackerrank.com/challenges/python-division
4. **Python If-Else:** https://www.hackerrank.com/challenges/python-if-else
5. **Loops:** https://www.hackerrank.com/challenges/python-loops
6. **Write a Function:** https://www.hackerrank.com/challenges/write-a-function
