03

CONTEXT

You are working as a Data Analyst for a Call Center Operations Team.

Management wants a clear overview of:

- Call volumes
- Agent performance
- Customer satisfaction
- Revenue generated from calls

Raw data is difficult to interpret, so your task is to summarize and analyze the data using Pivot Tables and present clear insights.

REQUIRED TASKS

Pivot Table Preparation:

- Ensure the dataset is:
 - Properly formatted
 - Free of blank headers
 - Converted into an Excel Table
- Create a new worksheet named Pivot_Analysis

Call Volume Analysis:

Create a Pivot Table that shows:

- Which month has the highest number of calls?
- Are there noticeable seasonal patterns?
- Which representative handled the highest number of calls?
- Is the workload evenly distributed?
- Which representative has the highest average satisfaction?
- Are high call volumes linked to lower satisfaction?
- Which call duration range is most common?
- Which representative generated the highest revenue?
- Does higher revenue correlate with higher satisfaction?
- Which day has the highest call volume?
- Which day has the best customer satisfaction?
- How does performance change when filtering by city or representative?

Pivot Table Formatting & Sorting:

- Apply professional formatting:
 - Clear headers
 - Number formatting
 - Sorted values (highest → lowest)
- Rename Pivot fields to business-friendly names.
- Create a Top 5 Representatives Pivot Table based on:
 - Revenue
 - Satisfaction
- Add a new sheet named Call_Center_Insights
- Write 3–4 clear business insights, such as:
 - Best-performing agents
 - Peak call times
 - Revenue vs satisfaction patterns
