

Adham Ashraf Saeed

Assignment 3

Task 1

Pivot Table Preparation:

Ensure the dataset is:

Call number	Customer ID	Duration	Representative	Date of Call	Purchase Amount	Satisfaction Rating	Financial Year	Day of week	Duration Bucket	Rating rounded
-------------	-------------	----------	----------------	--------------	-----------------	---------------------	----------------	-------------	-----------------	----------------

- Properly formatted
- Free of blank headers
- Converted into an Excel Table
- Create a new worksheet named Pivot_Analysis

Table Name:

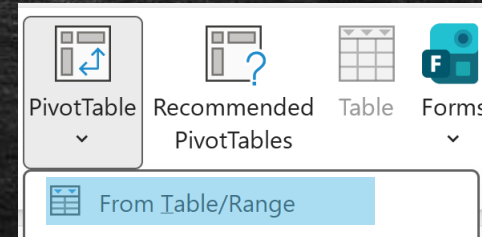

Call_center_Data

Pivot_Analysis

Task 2

Call Volume Analysis:

Create a Pivot Table that shows:

- Which month has the highest number of calls?

Mar	155
-----	-----

- Are there noticeable seasonal patterns?

Calls are highest in spring, lower in summer, and recover in October

- Which representative handled the highest number of calls?

R02	218
-----	-----

- Is the workload evenly distributed? Yes. The workload is fairly evenly distributed among representatives

- Which representative has the highest average satisfaction?

R01	3.92
-----	------

- Are high call volumes linked to lower satisfaction? Higher call volumes are slightly linked to lower satisfaction.

Task 2

Call Volume Analysis:

Create a Pivot Table that shows:

- Which call duration range is most common? 1 to 2 hours 524
- Which representative generated the highest revenue? R03 \$20,872
- Does higher revenue correlate with higher satisfaction? No, there is no clear correlation between revenue and satisfaction
- Which day has the highest call volume? Saturday 161
- Which day has the best customer satisfaction? Sunday 3.941
- How does performance change when filtering by city or representative?

Performance varies by representative, with differences in call volume, revenue, and satisfaction levels

Representative	(All)		
Row Labels	Count of Call number	Sum of Purchase Amount	Average of Satisfaction Rating
Sunday	146	\$13,476	3.941
Monday	133	\$13,054	3.749
Tuesday	138	\$13,143	3.893
Wednesday	153	\$15,702	3.939
Thursday	128	\$12,121	3.919
Friday	141	\$13,120	3.850
Saturday	161	\$16,007	3.894
Grand Total	1000	\$96,623	3.885

Task 3

Pivot Table Formatting & Sorting:

Apply professional formatting:

- Clear headers
- Number formatting
- Sorted values (highest → lowest)

Category:

General
Number
Currency
Accounting
Date
Time
Percentage

Sample
\$20,872

Decimal places: 0

Symbol: \$

Category:

Sample
3.939

Decimal places: 3

Sort

Remove "Total Calls"

A↓ Sort Smallest to Largest

Z↓ Sort Largest to Smallest

Task 3

Pivot Table Formatting & Sorting:

- Rename Pivot fields to business-friendly names.
- Create a Top 5 Representatives Pivot Table based on:

1. Revenue
2. Satisfaction

Top 10 Filter (Representative) ? X

Show

Top 5 Items by Total Revenue

OK Cancel

Top 10 Filter (Representative) ? X

Show

Top 5 Items by Average of Satisfaction Rating

OK Cancel

Top 5 Representatives		Top 5 Representatives	
Total Revenue		Average of Satisfaction Rating	
Representative	Total Revenue	Representative	Average of Satisfaction Rating
R03	\$20,872	R01	3.92
R02	\$20,581	R04	3.90
R05	\$20,104	R05	3.88
R01	\$18,415	R02	3.87
R04	\$16,651	R03	3.86
Grand Total	\$96,623	Grand Total	3.89

Filter	>	Clear Filter From "Representative"
✓ Subtotal "Representative"		Keep Only Selected Items
Expand/Collapse	>	Hide Selected Items
Group...		Top 10...
Ungroup...		Label Filters...
Move	>	Value Filters...

Task 3

Pivot Table Formatting & Sorting:

- Add a new sheet named Call_Center_Insights

Call_Center_Insights

Write 3–4 clear business insights, such as:

- Best-performing agents
- Peak call times
- Revenue vs satisfaction patterns

Final Insights

R03 generated the highest revenue, while R01 achieved the highest customer satisfaction, showing that performance varies depending on the metric used.

R02 handled the highest number of calls, indicating it had the heaviest workload among all representatives.

There is no clear correlation between revenue and customer satisfaction, as high revenue does not necessarily lead to higher satisfaction scores.

Customer satisfaction is highest on Sunday, making it the best-performing day in terms of service
