## DATA SOURCE

[Northwind Dataset](#)

## REQUIRED TASKS

1. Write a query to rank each customer based on the total value of their orders, with 1 being the highest order value.
2. Write a query to find the second highest unit price of products in each category.
3. Write a query to calculate the total sales amount each employee made and include a running total (cumulative sum) of these sales
4. Write a query to find out the employees whose average order value is higher than the average order value of all employees.
5. Write a query to find the employee who processed the most orders each year.
6. Write a query to find the top 3 most expensive products in each category.
7. Rank products based on their total sales amount inside each category, with rank 1 being the highest-selling product per category.

## REQUIRED TASKS

8. Find the highest order value handled by each employee and return the corresponding order.
9. Calculate total sales per category and show each category's percentage of total sales
10. Find customers whose total order value is above the average customer order value
11. Find products that have never been ordered
12. For each employee, calculate total sales per year
